Speeds vs Devices

Speed Test · https://www.bluestreamfiber.com/support/speeds-vs-devices/

Do you have enough speed?

In today’s interconnected world, a reliable, high-speed internet connection is *vital* for both personal and professional endeavors, such as: media streaming, online gaming, video calls, and more. As the number of internet-connected devices continues to multiply, understanding the relationship between internet speeds and device capacity is crucial.

The table below is a compilation of recommended internet speeds for a specific range of regular, non-intensive device usage. Keep in mind, **some devices use more internet bandwidth than others** – which will lower the limit of devices that can be used within a specific internet speed.

Internet Speed	Number of Devices	Capacity
100-250 Mbps	1-3	Download a 10 GB file in under 14 minutes
300-400 Mbps	4-7	Download a 10 GB file in under 5 minutes
500-600 Mbps	8+	Download a 10 GB file in under 3 minutes

If you think your current internet speed isn’t fast enough for your usage, feel free to **call us** and speak with one of our representatives.
