Which streaming devices work with the Blue Stream Fiber system? How much do they cost?

Video FAQs · https://www.bluestreamfiber.com/support/which-streaming-devices-work-with-the-blue-stream-fiber-system-how-much-do-they-cost/

To watch Blue Stream Fiber TV service on your TVs, you can either install a Set-Top box or you can use the Blue Stream Fiber TV App through a Fire TV Stick or Apple TV. The Set-Top box will allow you to take advantage of the full platform and all of it functions.

Should you opt to access you TV service via the Amazon Fire Stick, we suggest any current generation 4K streamer. Older Generation 2 streamer Firesticks will work but will not receive 4K streams.

Unfortunately, at this time Roku does not work with TiVo’s operating system which means the Blue Stream Fiber TV app will not work on a Roku.
