

Battery Backup (BBU)

This is the battery backup we install so your Blue Stream Fiber Voice and/or Internet service continues to work properly if the power goes out.

The standard battery installed lasts for 8 hours after a power outage occurs. An up to 24 hour battery is also available.

You are not required to have this device installed by Blue Stream Fiber although **it is highly recommended** due to the frequent power surges and outages that occur in our South Florida climate.

Blue Stream Fiber can install, maintain and replace your battery when needed for a modest monthly maintenance fee or you may purchase, install and maintain your own battery backup unit. **For more information, go to www.bluestreamfiber.com/battery-backup.**

This is the type of battery backup installed at your residence. Actual backup unit model may vary.

Trouble Shooting Your BBU*

- **SYSTEM STATUS LIGHT:**
Green light = Normal status
- **DC LIGHT:**
Turns green if commercial power fails. The unit will also beep.
- **MUTE LIGHT:**
Flashes orange after pressing the ALARM SILENCE button.
- **BATTERY LIGHT:**
Turns red if the battery is bad/dead.
- **ALARM SILENCE:**
Press to mute the beeping noise.
- **COLD START:**
Press to reset your GigaCenter ONT/router.

Front Panel of Battery Backup Unit.*

**Actual unit may vary*

*Note: these are general instructions that apply to most standard BBU's. The model installed may be slightly different than shown.
